Last updated September 25, 2022

Florida Medical Association
1430 Piedmont Dr., East
Tallahassee, FL 32308

FOREWORD

The FMA Public Policy Compendium provides a listing of the Florida Medical Association's policy positions adopted by the FMA House of Delegates and FMA Board of Governors. Each policy is affixed with a one letter prefix code (P) followed by a multi-digit number which is unique to the subject matter.

FMA councils and committees review seven year-old public policies on an annual basis and make recommendations to the House of Delegates to reaffirm or sunset. Policies that sunset are kept in a separate archive system for historical purposes.

An indexed table of contents is located on pages i-xxii.

P 5.000 ABORTION

P 5.001 ABORTION CIVIL DAMAGES

The Florida Medical Association supports legislation containing the concept that provides that no person shall be liable in civil damages for any act or omission that results in a person being born alive instead of aborted. No physician or other professional personnel shall be required to perform an act violative of good medical judgment or personally held moral principles. P 30.000 ADVERTISING

P 30.001 PRINCIPLES GOVERNING ADVERTISING IN ALL PUBLICATIONS OF THE FLORIDA MEDICAL ASSOCIATION

The Florida Medical Association (FMA) seeks to promote the science and art of medicine and the betterment of public health. In serving these aims, the FMA communicates regularly with the members of the medical profession, with professional persons in allied fields, and with the public. A substantial part of this

communication is carried out through the regular production and distribution of its publications. The appearance of advertising in FMA is not an FMA guarantee or endorsement of the product or service. The fact that an advertisement for a product, service or company has appeared in the FMA publication shall not be referred to in collateral advertising. As a matter of policy, the FMA will sell advertising space in its publications when (1) the buyer believes purchase of such space represents a sound expenditure, and (2) the inclusion of advertising material does not interfere with the purpose of the publication. These principles are applied by the FMA in determining the eligibility of products and services for advertising in FMA publications. The FMA reserves the right to refuse advertising in any of its publications which it considers to contradict or contravene in any manner the goals and purposes of the FMA as set forth in the Association's Bylaws. P 110.010 SUPPORT FOR DEPARTMENT OF HEALTH DURING PROPOSED REORGANIZATION, AUGUST, 2011

The Florida Medical Association shall emphasize and reinforce the following key items ~~during a public hearing scheduled for August 4, 2011~~ as essential to not only maintain but to enhance the health care system of the great State of Florida, to wit:

- The position of Surgeon General/Secretary of the Department of Health, if the positions are to be separated in a future reorganization plan, that both positions be statutorily mandated to be filled by a physician licensed under F.S. 458 or F.S. 459;
- On any future reorganization plan in which the Department of Health is proposed to be amalgamated with other State Agencies, that the Secretary of this newly created Department must be a physician licensed under F.S. 458 or F.S. 459;
- The present Division of Medical Quality Assurance (MQA) in the Department of Health be maintained in its present organizational format and not be transferred to another State Agency such as but not limited to the Department of Business and Professional Regulation;
- That the position of the present statutorily mandated Deputy Secretary for Children's Medical Services and Deputy State Health Officer for Children be maintained with a realignment of the children's health mission in any reorganizational plan and that this positions be filled as soon as feasible;
- That the present Children's Medical Services (CMS) Network, physician led and directed, should be maintained in the Department of Health and not outsourced to the Agency for Health Care Administration in which physician influence and delivery of quality enhanced child health programs would presumably be markedly diluted;
- Maintaining and expanding the present Children's Medical Services provider service network for both specialty and primary care should remain a top priority under physician direction to allow them parity in competing with traditional health maintenance organizations (HMO) which frequently have little or no direct physician involvement or direction and depend on rudimentary quality child health measures not comparable with the Children's Medical Services Network; and
- The present physician directed Child Protection Teams (CPT's) under Children's Medical Services deal with multi-faceted problems and challenges of child abuse and should remain with adequate recurring funding in the Department of Health and not be transferred as proposed to the Department of Children and Families (DCF).

P 175.000 ETHICS – MEDICAL

P 175.001 PATIENT FEE DISPUTES

The Florida Medical Association adopts the following policy on patient fee dispute complaints: (1) Under the direction of the Judicial Council, each county medical society would be encouraged to review patient fee complaints/disputes perhaps through a subcommittee of their grievance committee or through a separate committee established for that purpose; (2) All fee disputes would be handled under the following essential principles: a. All proceedings are voluntary to all parties. b. All deliberations of the fee dispute panels and their decision would be confidential to the highest degree and any information or records would be available only to the parties to the proceeding, the grievance committee, and the Judicial Council. c. The decision of the committees would be advisory only. Neither party would be required by organized medicine to follow the decision. The parties would not be precluded, however, from independently and privately agreeing to be bound by the decision; (3) The make-up of the fee dispute committee would be left up to the decision of each county medical society. The Judicial Council suggests consideration of a small committee of perhaps three members which would include a lay person; (4) When a complaint involves both fee and non-fee issues, the fee committee would advise the grievance committee regarding its position on the issues. The grievance committee would issue a combined opinion on the complaint; (5) Notwithstanding paragraph (2) above, if the fee dispute committee found that charges were so exorbitant as to be unethical, then the committee could refer the entire case to the county medical society grievance committee; (6) The Judicial Council will prepare model step-by-step complaints under these guidelines. A physician may make a determination or certification of death as currently provided by law in any situation. (*BOG October 1991*) (*Reaffirmed HOD 2002*) (*Reaffirmed HOD 2011*)

The Florida Medical Association (FMA) supports legislation that ensures human embryos shall not be created by fertilizing donor oocytes with donor sperm except at the specific request of a patient or patients who intend to use such embryos for his/her/their own treatment; and further, understanding that only patients should be responsible for the disposition decisions of the human embryos they create, the FMA strongly denounces the purposeful creation of banks of cryopreserved human embryos, through the combination of donated oocytes and donated sperm, at the request of an in vitro fertilization facility or parent organization rather than patients themselves; and further, understanding that embryo donation, as is defined by the American Society for Reproductive Medicine, is the donation of cryopreserved embryos from the patients that created them,² calling human embryos that are created through the combination of donated oocytes with donated sperm “donated embryos,” at the direction of an in vitro fertilization facility and not patients, misleads the infertile patient into believing said embryos are actually donated by patients, should be considered false advertising, fundamentally unethical and is therefore denounced by the FMA. (*Res 15-103, HOD 2015*)

P 175.007 HEALTH CARE RIGHTS OF CONSCIENCE

The Florida Medical Association advocates for healthcare rights of conscience for physicians and hereby acknowledges that it is a basic right of individual physicians to freely exercise their right to conscientious objection in their healthcare work without fear of coercion or penalty, and further supports healthcare rights of conscience legislation to protect physicians from coercion, imposition and any type of penalty by governmental and other outside regulatory measures that would violate the professional integrity of physicians and endanger their right to practice their chosen field of medicine. P 185.012 MEDICAL EXPERT TESTIMONY AND THE "STANDARD OF CARE"

Following are Guidelines for Expert Witness Testimony for FMA members who render any type of expert witness testimony: (1) The physician must be honest and trustworthy when writing reports, completing or signing forms, or providing evidence in litigation or other formal inquiries. The physician must take reasonable steps to verify any statement before signing a document. (2) The physician's review of medical facts must be thorough, fair, and impartial and must not exclude any relevant information. It must not be biased to create a view favoring the plaintiff, the government, or the defendant. The goal of a physician testifying in any judicial proceeding should be to provide testimony that is complete, objective, and helpful

to a just resolution of the proceeding. (3) The physician must have experience and knowledge in the areas of clinical medicine that enable him or her to testify about the standards of care that applied at the time of the occurrence that is the subject of the legal action. (4) The physician's testimony must reflect an evaluation of performance in light of generally accepted standards, neither condemning performance that falls within generally accepted practice standards nor endorsing or condoning performance that falls below these standards. (5) The physician must make every effort to assess the relationship of the alleged substandard practice to the outcome, because deviation from a practice standard is not always substandard care or causally related to a bad outcome. (6) The physician shall identify as such any personal opinions that vary significantly from generally accepted medical practice. (7) The physician must be prepared to have testimony given in any judicial proceeding subjected to peer review by the Expert Witness Committee or by any other institution or professional organization to which the physician belongs. (8) The physician shall not accept a contingency fee for providing expert medical opinion services. (9) Charges for medical expert opinion services shall be reasonable and commensurate with the time and effort given to preparing and providing those services. P 220.001 MEDICAL INFORMATION TECHNOLOGY

The Florida Medical Association (FMA) recognizes the potential substantial advantages of medical information technology systems to improve patient care, and supports the ongoing effort to appropriately implement those systems. It is the policy of the FMA that all systems implemented, and any government or hospital regulations that affect those systems, must 1) promote optimal patient care delivery; 2) protect patient rights; 3) benefit as many patients as possible; and 4) anticipate future advances in technology. To do this, those systems and regulations must meet the following guidelines:

Optimal Patient Care Delivery: All medical information technology systems must be established and maintained with the delivery of optimal patient care as the primary objective; the physician-patient relationship is central to providing optimal patient care and all systems must preserve physicians'

responsibility for patient care decisions based on their education and experience; medical information systems are considered supporting technology to assist the physician's care of the patient; physicians are responsible for providing optimal patient care, which may be improved, but is not dependent upon a medical information system; to protect the ability to provide optimal patient care, any system considered for implementation must be shown through adequate demonstration projects to — 1) work 2) be cost effective 3) not impose undue financial strains on practitioners 4) not unnecessarily increase physician workload and 5) benefit patient care; to protect the ability to provide optimal patient care, physicians and/or their office staffs must be allowed sufficient time to successfully adopt any new technology system; hospital-based systems must enhance the ability of physicians and nurses to provide patient care, and not be implemented just for cost considerations or hospital convenience; hospital-based systems must enhance the role of physicians and nurses in providing direct patient care, and not just shift clerical and administrative duties to physicians and/or the nursing staff; to minimize the potential for adverse patient care consequences, hospitals must obtain input from the medical and nursing staff before implementing medical information technology decisions.

Patients Rights: All systems must ensure that the physician caring for the patient retain primary control and responsibility over patient care information, subject to the rights of patients to access and release their healthcare information; all systems must secure the privacy of patient care information, including the right to privacy relating to government and insurance entities, subject to the right of the patient to release their healthcare information. *Patient Access To New Technology:* To encourage the dissemination of medical information technology, systems must be developed and offered that are affordable for small office practices; to ensure that the financial burden of new technology does not slow its implementation, there must be no unfunded government mandates; to ensure all patients ultimately have access to new technology innovations, systems must be developed using accepted standards to allow for the sharing of patient care information between *all* providers and clinical entities, and must be developed irrespective of specific systems or vendors. *Anticipate Future Advances in Technology:* Systems must be developed to be flexible and adaptable, in anticipation of future advances in technology, and/or the potential of a future electronic information infrastructure; systems must easily interface with all other systems; further, the cost of system interfaces must not hinder the dissemination of technology designed to improve patient care delivery. P 245.016 COMPOSITION OF THE BODY OF MEDICAL STAFF'S EXECUTIVE COMMITTEE AND/OR BOARD OF TRUSTEES

Principles for Physician Employment (language adopted from AMA Policy H-225.950)

Addressing Conflicts of Interest

A physician's paramount responsibility is to his or her patients. Additionally, given that an employed physician occupies a position of significant trust, he or she owes a duty of loyalty to his or her employer. This divided loyalty can create conflicts of interest, such as financial incentives to over- or under-treat patients, which employed physicians should strive to recognize and address.

Employed physicians should be free to exercise their personal and professional judgement in voting, speaking and advocating on any manner regarding patient care interests, the profession, health care in the

community, and the independent exercise of medical judgment. Employed physicians should not be deemed in breach of their employment agreements, nor be retaliated against by their employers, for asserting these interests. Employed physicians also should enjoy academic freedom to pursue clinical research and other academic pursuits within the ethical principles of the medical profession and the guidelines of the organization.

In any situation where the economic or other interests of the employer are in conflict with patient welfare, patient welfare must take priority.

Physicians should always make treatment and referral decisions based on the best interests of their patients. Employers and the physicians they employ must assure that agreements or understandings (explicit or implicit) restricting, discouraging, or encouraging particular treatment or referral options are disclosed to patients.

No physician should be required or coerced to perform or assist in any non-emergent procedure that would be contrary to his/her religious beliefs or moral convictions; and

No physician should be discriminated against in employment, promotion, or the extension of staff or other privileges because he/she either performed or assisted in a lawful, non-emergent procedure, or refused to do so on the grounds that it violates his/her religious beliefs or moral convictions.

Assuming a title or position that may remove a physician from direct patient-physician relationships--such as medical director, vice president for medical affairs, etc.--does not override professional ethical obligations. Physicians whose actions serve to override the individual patient care decisions of other physicians are themselves engaged in the practice of medicine and are subject to professional ethical obligations and may be legally responsible for such decisions. Physicians who hold administrative leadership positions should use whatever administrative and governance mechanisms exist within the organization to foster policies that enhance the quality of patient care and the patient care experience.

Refer to the AMA Code of Medical Ethics for further guidance on conflicts of interest.

Advocacy for Patients and the Profession

Patient advocacy is a fundamental element of the patient-physician relationship that should not be altered by the health care system or setting in which physicians practice, or the methods by which they are compensated.

Employed physicians should be free to engage in volunteer work outside of, and which does not interfere with, their duties as employees.

Contracting

Physicians should be free to enter into mutually satisfactory contractual arrangements, including employment, with hospitals, health care systems, medical groups, insurance plans, and other entities as permitted by law and in accordance with the ethical principles of the medical profession.

Physicians should never be coerced into employment with hospitals, health care systems, medical groups, insurance plans, or any other entities. Employment agreements between physicians and their employers

should be negotiated in good faith. Both parties are urged to obtain the advice of legal counsel experienced in physician employment matters when negotiating employment contracts.

When a physician's compensation is related to the revenue he or she generates, or to similar factors, the employer should make clear to the physician the factors upon which compensation is based.

Termination of an employment or contractual relationship between a physician and an entity employing that physician does not necessarily end the patient-physician relationship between the employed physician and persons under his/her care. When a physician's employment status is unilaterally terminated by an employer, the physician and his or her employer should notify

the physician's patients that the physician will no longer be working with the employer and should provide them with the physician's new contact information. Patients should be given the choice to continue to be seen by the physician in his or her new practice setting or to be treated by another physician still working with the employer. Records for the physician's patients should be retained for as long as they are necessary for the care of the patients or for addressing legal issues faced by the physician; records should not be destroyed without notice to the former employee.

Where physician possession of all medical records of his or her patients is not already required by state law, the employment agreement should specify that the physician is entitled to copies of patient charts and records upon a specific request in writing from any patient, or when such records are necessary for the physician's defense in malpractice actions, administrative investigations, or other proceedings against the physician.

Physician employment agreements should contain provisions to protect a physician's right to due process before termination for cause. When such cause relates to quality, patient safety, or any other matter that could trigger the initiation of disciplinary action by the medical staff, the physician should be afforded full due process under the medical staff bylaws, and the agreement should not be terminated before the governing body has acted on the recommendation of the medical staff. Physician employment agreements should specify whether or not termination of employment is grounds for automatic termination of hospital medical staff membership or clinical privileges. When such

cause is non-clinical or not otherwise a concern of the medical staff, the physician should be afforded whatever due process is outlined in the employer's human resources policies and procedures.

Physicians are encouraged to carefully consider the potential benefits and harms of entering into employment agreements containing without cause termination provisions. Employers should never terminate agreements without cause when the underlying reason for the termination relates to quality, patient safety, or any other matter that could trigger the initiation of disciplinary action by the medical staff.

Physicians are discouraged from entering into agreements that restrict the physician's right to practice medicine for a specified period of time or in a specified area upon termination of employment.

Physician employment agreements should contain dispute resolution provisions. If the parties desire an alternative to going to court, such as arbitration, the contract should specify the manner in which disputes will be resolved.

Refer to the AMA Annotated Model Physician-Hospital Employment Agreement and the AMA Annotated Model Physician-Group Practice Employment Agreement for further guidance on physician employment contracts.

Hospital Medical Staff Relations

Employed physicians should be members of the organized medical staffs of the hospitals or health systems with which they have contractual or financial arrangements, should be subject to the bylaws of those medical staffs, and should conduct their professional activities according to the bylaws, standards, rules, and regulations and policies adopted by those medical staffs.

Regardless of the employment status of its individual members, the organized medical staff remains responsible for the provision of quality care and must work collectively to improve patient care and outcomes.

Employed physicians who are members of the organized medical staff should be free to exercise their personal and professional judgment in voting, speaking, and advocating on any matter regarding medical

staff matters and should not be deemed in breach of their employment agreements, nor be retaliated against by their employers, for asserting these interests.

Employers should seek the input of the medical staff prior to the initiation, renewal, or termination of exclusive employment contracts.

Refer to the AMA Conflict of Interest Guidelines for the Organized Medical Staff for further guidance on the relationship between employed physicians and the medical staff organization.

Peer Review and Performance Evaluations

All physicians should promote and be subject to an effective program of peer review to monitor and evaluate the quality, appropriateness, medical necessity, and efficiency of the patient care services provided within their practice settings.

Peer review should follow established procedures that are identical for all physicians practicing within a given health care organization, regardless of their employment status.

Peer review of employed physicians should be conducted independently of and without interference from any human resources activities of the employer. Physicians--not lay administrators--should be ultimately responsible for all peer review of medical services provided by employed physicians.

Employed physicians should be accorded due process protections, including a fair and objective hearing, in all peer review proceedings. The fundamental aspects of a fair hearing are a listing of specific charges, adequate notice of the right to a hearing, the opportunity to be present and to rebut evidence, and the opportunity to present a defense. Due process protections should extend to any disciplinary action sought by the employer that relates to the employed physician's independent exercise of medical judgment.

Employers should provide employed physicians with regular performance evaluations, which should be presented in writing and accompanied by an oral discussion with the employed physician. Physicians should be informed before the beginning of the evaluation period of the general criteria to be considered in their performance evaluations, for example: quality of medical services provided, nature and frequency of patient complaints, employee productivity, employee contribution to the administrative/operational activities of the employer, etc.

(f) Upon termination of employment with or without cause, an employed physician generally should not be required to resign his or her hospital medical staff membership or any of the clinical privileges held during the term of employment, unless an independent action of the medical staff calls for such action, and the physician has been afforded full due process under the medical staff bylaws. Automatic rescission of medical staff membership and/or clinical privileges following termination of an employment agreement is tolerable only if each of the following conditions is met:
The agreement is for the provision of services on an exclusive basis; and
Prior to the termination of the exclusive contract, the medical staff holds a hearing, as defined by the medical staff and hospital, to permit interested parties to express their views on the matter, with the medical staff

subsequently making a recommendation to the governing body as to whether the contract should be terminated, as outlined in AMA Policy H-225.985; and
The agreement explicitly states that medical staff membership and/or clinical privileges must be resigned upon termination of the agreement.

Refer to the AMA Principles for Incident-Based Peer Review and Disciplining at Health Care Organizations (AMA Policy H-375.965) for further guidance on peer review.

Payment Agreements

Although they typically assign their billing privileges to their employers, employed physicians or their chosen representatives should be prospectively involved if the employer negotiates agreements for them for professional fees, capitation or global billing, or shared savings. Additionally, employed physicians should be informed about the actual payment amount allocated to the professional fee component of the total payment received by the contractual arrangement.

Employed physicians have a responsibility to assure that bills issued for services they provide are accurate and should therefore retain the right to review billing claims as may be necessary to verify that such bills are correct. Employers should indemnify and defend, and save harmless, employed physicians with respect to any violation of law or regulation or breach of contract in connection with the employer's billing for physician services, which violation is not the fault of the employee.

2. Insurers must be transparent and proactive in informing enrollees about all deductibles, copayments and other out-of-pocket costs that enrollees may incur.
3. Insurers must maintain at all times an accurate and complete list of all in-network physicians. This information shall be contained in a public database, which must be easily accessible online by health care consumers.
4. Prior to scheduled procedures, insurers must provide enrollees with reasonable and timely access to in-network physicians.
5. Patients who are seeking emergency care should be protected under the “prudent layperson” legal standard as established in state and federal law, without regard to prior authorization or retrospective denial for services after emergency care is rendered.
6. Out-of-network payments must not be based on a contrived Medicare rate or a rate under the control of the insurance company.
7. In lieu of balance billing of patients, an appropriate and fair minimum benefit standard for unexpected out-of-network services should be created. The minimum benefit standard should accurately reflect reasonable physician charges, such as through the establishment of a charge-based reimbursement schedule connected to

an independently recognized and verified database that is geographically specific, completely transparent, and independent of the control of either payers or providers.

8. The primary determinant in any provider-carrier dispute resolution process should be based on the usual and customary charges from an independently recognized and verified database that is geographically specific, completely transparent, and independent of the control of either payers or providers.

The FMA should establish a database of physician underpayments based upon carriers' unilateral determination of allowable provider charges arrived at without reference to the usual and customary charges from an independently recognized and verified database that is geographically specific, completely transparent, and independent of the control of either payers or providers. P 450.009 ENCROACHMENT OF NONPHYSICIANS ON THE PRACTICE OF MEDICINE

The Florida Medical Association (FMA) adopts the following statement on encroachment of non-physicians on the practice of medicine: "The decades since World War II have seen a very marked increase in the

number of allied health professionals. These professionals include psychologists, optometrists, nurse practitioners, physical therapists and technicians and others. Allied health professionals possess very important skills in their respective fields and have made and can make lasting contributions to the total picture of health care. The FMA has no quarrel with the activities of allied health professionals when they act within the scope of their training and expertise. However, the FMA is concerned about repeated efforts by non-physician groups to take over functions properly restricted to doctors of medicine or osteopathy. One such area of encroachment is in the prescription of diagnostic and therapeutic drugs where both optometrists and pharmacists have recently obtained limited rights by legislative action which, in our opinion, is not justified by the training and experience of these practitioners and will be detrimental to the health of patients whom they attempt to treat. Other groups, such as psychologists, are mounting determined pushes to obtain admitting privileges to acute care hospitals despite the fact that they are not properly trained to direct hospital care. In the opinion of the FMA, only doctors of medicine or osteopathy have the proper background of training and experience to qualify physicians to prescribe drugs and assume overall responsibility for hospitalized patients. Allied health professionals often provide invaluable assistance in the care of hospitalized patients, but they do not have the background to qualify them to attempt total care of such patients. The FMA will cooperate in every way possible with allied health professionals to the end of improving total health care, but will resist all attempts by allied health professionals to assume the responsibilities of physicians without possessing the qualifications of doctors of medicine or osteopathy. The FMA will continue to oppose efforts by chiropractors and other less well trained groups or individuals that attempt to legislate practice activities beyond the scope of their training." The Florida Medical Association adopted the recommendations and guidelines as presented in the September 19, 2012 report of the FMA's Scope of Practice Task Force. * (BoG October 2012; Appendix P 450.027) (Reaffirmed via Res 17-307, HOD 2017)

**The report provides that the FMA address scope issues within a framework that can be applied in a variety of circumstances and further help the FMA and other groups to achieve a common understanding of how the FMA will approach scope issues in the future and what is expected of groups who may seek the FMA's assistance on an issue. This approach allows maximum flexibility in the dynamic legislative, political and economic environment and does not allow any single issue to define the FMA. The FMA continues its efforts to promote the concept of physician-directed care that ensures patient safety while promoting access to care. As long as physicians remain the leader of the health care team, it may be appropriate for the FMA and specialty societies to consider, on a case-by-case basis, scope of practice expansions when sufficiently protective of patient safety and improved patient access.*
